#15141A

night
#141414

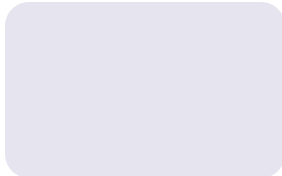

grey-600
#6B6A75

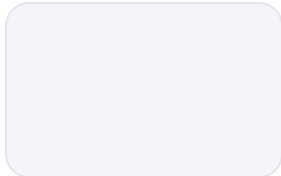

grey-500
#5B5670

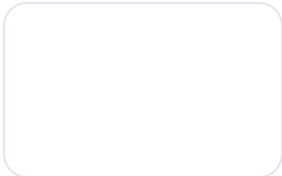

grey-400
#8E8C99

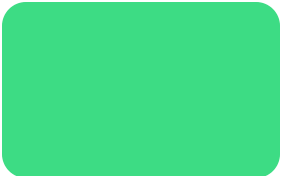

grey-200
#E6E4EE

grey-100
#F5F4F8

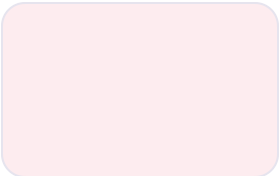

white
#FFFFFF

green-400
#3DDC84

red-600
#C62D48

red-100
#FDECEF

Semantic tokens (use these)

CSS variable = token name with / replaced by - (e.g. brand/primary → var(--brand-primary)).

TOKEN	ALIAS OF	USE FOR
 brand/primary	violet-600	Primary buttons, active tab count, key numbers, focus borders, “You” badge
 brand/tint	violet-100	Highlight cards: countdown, reveal, guests stat, “next shot” slot
 brand/highlight	violet-300	Current-shot indicator on dark / photo backgrounds only
 color/text/primary	ink	Headings, body, labels on white; dark (secondary) buttons
 color/text/muted	grey-600	Sublines, helper text, timestamps, icons (5.3:1 on white)
 color/text/on-tint	grey-500	Secondary text on brand/tint cards; photo-card messages
 color/text/placeholder	grey-400	Input placeholders and empty slot numbers only (never real content)
 color/text/inverse	white	Text on photos, dark surfaces and violet buttons
 color/surface/base	white	Bottom sheet, cards, page background
 color/surface/subtle	grey-100	Inputs, secondary buttons, info cards, tab track, empty slots
 color/surface/dark	night	App background behind header, photo viewer, header gradient end
 color/border/subtle	grey-200	1px borders on inputs, cards, secondary buttons
 color/status/live	green-400	Live dot / check in status pills (dot or icon only, never text)
 color/status/danger	red-600	Delete icon, error text and error input border
 color/status/danger-tint	red-100	Delete button background
 color/border/dashed	violet-200 · NEW	Dashed 1.5px: empty shot slots, hidden photo cards, “Create new event” card, add-colorswatch
 color/status/success-tint	green-100 · NEW	Background of the LIVE pill on light surfaces
 color/status/warning	amber-600 · NEW	“Unsaved changes” dot on the Settings save card (dot only)
 color/status/success	green-700 · NEW	Success TEXT on white: “Event created”, LIVE label (green-400 fails contrast as text)
 color/status/danger-border	red-200 · NEW	Border of the Delete event card (desktop Settings)

Event theme colors NEW

Hosts pick one in Create · Look or Settings. At runtime the pick replaces --brand-primary on guest screens only; host screens always stay violet.

theme/violet
#6B2BD9 · default

theme/red
#DC4A5A

theme/pink
#C8367F

theme/amber
#B7700A

theme/teal
#0F7A64

theme/blue
#2E6FDC

 All six keep white button text at 4.5:1 or better. Custom colors (+ swatch) are darkened until they pass. Derive the tint as the theme color at 10% on white; “next shot” slot and focus ring follow the theme.

Typography, spacing & radius

Two families: Fraunces for headings (font/heading, SemiBold 600) and Plus Jakarta Sans for everything else (font/brand, 400–800). Fraunces only on screen titles, event names and big moments — never on buttons, forms or numbers.

Display text/display	Apple’s 4th Birthday	Fraunces 32 / 110% · SemiBold 600 · –1% — screen titles, event names, greetings (28 on Create steps)
Title text/title	You’ve got 5 shots today.	Fraunces 24 / 120% · SemiBold 600 — sheet headlines. Big counters stay Jakarta ExtraBold.
Heading text/heading	Your best moments	18 / 130% · Bold 700 — section and card titles (16 Bold inside cards)
Button text/button	Join & start shooting	16 / 100% · SemiBold 600 — all buttons (14 in compact buttons)
Body text/body	Catch the candles, the cake and the party-hat chaos.	15 / 150% · Regular 400 or Medium 500 — paragraphs, input values
Label text/label	What should we call you?	14 / 140% · SemiBold 600 — field labels, tabs, list text
Caption text/caption	Sat, Oct 18 · Hosted by Kaye Santos	13 / 145% · Medium 500 — meta, helper text, hints
Micro text/micro	Capture is live · 38 / 100	12 / 130% · SemiBold 600 · +2% — pills, badges, counters (floor: never below 11)

FONT/HEADING · NEW

Aa Fraunces

Every guest. Five frames. One shared story.

Google Fonts · variable · load 600 only (opsz auto). Soft, warm serif that works for birthdays and weddings alike. Fallback: Georgia, serif.

DESKTOP HEADINGS (≥1024) · NEW	
Apple’s	text/display-desktop 48 · event header
Events	44 · page title · 40 wizard steps
Welcome	text/title-desktop 36 · auth forms
Event details	22–24 · card titles
Santos Reunion	19–21 · event names in cards

Corner radius

radius/sm · 12

Buttons, pills, tabs, avatars

Spacing & elevation

- space/page 20screen side padding, sheet padding
- 16–20gap between sections inside the sheet
- 8–12label to field, grid gaps, button icon gap
- 4–6stacked text lines, dot groups

Primary glow

0 10 24 · violet 30%

Active tab

0 2 8 · ink 8%

Buttons, badges & controls

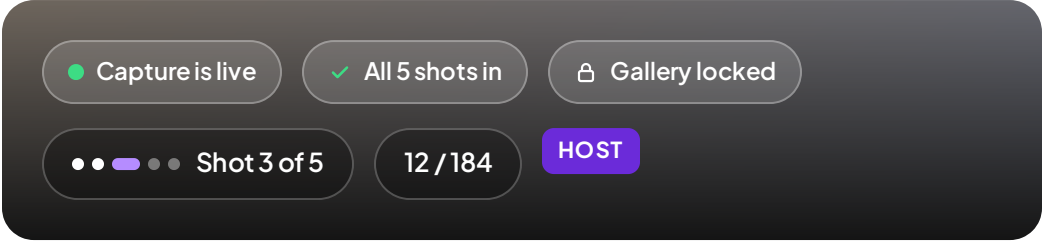

All buttons are pills. One violet primary per screen; everything else steps down to grey, dark or white. Minimum touch target 44×44 — compact 32px buttons get invisible padding to reach it.

Buttons

VARIANT	DEFAULT	PRESSED	DISABLED
Primary 56h · brand/primary · glow shadow. Join, Take shot, Keep, Reveal, Download			
Secondary surface/subtle + border/subtle. Retake, Copylink, filter chips			
Dark text/primary fill. Host utility actions: Save changes, Download QR, Download ZIP			
On-tint White fill, violet text. Only inside brand/tint cards: Review photos first			
Compact & icon 32h / 12px text. Photo-card actions. Icon-only buttons need aria-label			

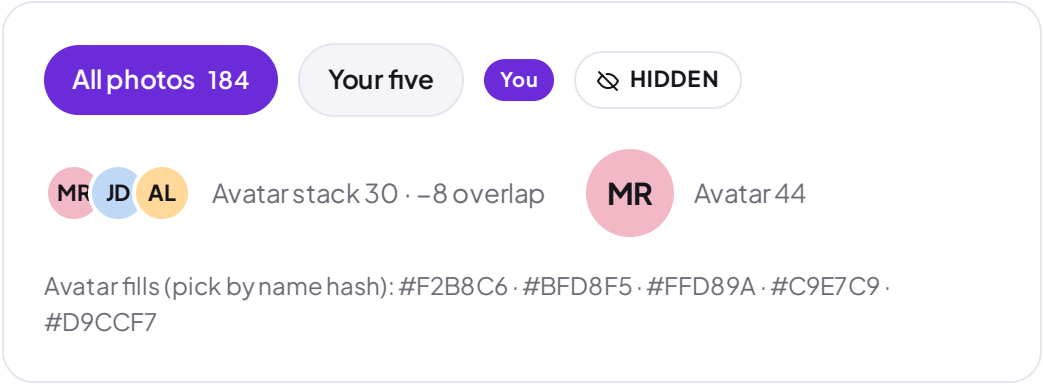

Pills on photos

Frosted: white 15% fill, white 30% border, 12px blur. Status icon/dot carries the meaning.

Badges, chips & avatars

Filter chips are pills; the active one fills violet. Avatars use pastel fills with initials.

Controls & indicators

Toggle

52×30 · on = brand/primary, off = border/subtle

Shot progress

5 segments · 6h · filled = shots taken

Pager dots

Photo viewer · active dot stretches to 18

Segmented tabs

Host screens · 48h track (40h tabs)

Event status badges NEW

One badge per event lifecycle state. White pill on light surfaces and cards; frosted pill on photos.

ON LIGHT / CARDS

Draft → Upcoming → Open → Closed → Revealed. LIVE pill sits next to live-updating section titles (Latest photos).

ON PHOTOS / HEADERS

Join screen swaps the pill by state: not open yet (clock + start time), open (green dot), closed (violet-300 dot).

Form & flow controls NEW

Used in sign up / sign in, password reset, Create event and Settings.

Checkbox

20px box, radius 6. Whole row is the hit area.

Password strength

Weak (red) · Good (violet) · Strong (green). Min 8 chars. Confirm field shows a green check when it matches.

Theme color picker

40px swatches (32 compact). Selected = white check + 2px ring in its own color. Radio group semantics.

Wizard stepper

Desktop: numbered steps in the wizard bar. Mobile: 3-segment bar under the header. Done / active / upcoming.

Inputs & navigation

Fields sit on surface/subtle with a 1px border and 14 radius. Labels always sit above the field (never placeholder-only). Use font-size 16 on real inputs on iOS to stop auto-zoom.

Guests can take photos

Outlined section card

Host dashboard sections: Capture, Invite, Settings. 16 Bold title + caption, radius/xl.

Photo viewer info

On surface/dark. Message card = white 7%. Secondary text #A9A6B5 (7.6:1).

Host cards — events, create & settings NEW

Desktop cards sit white on the grey page (surface/subtle) with a 1px border and radius 22–24.

Live now

Apple’s 4th Birthday

Sat, Oct 18 · 2:00–5:00 PM

Open dashboard

Event card

4-col grid on desktop, list row on mobile. Live = violet border + glow + primary CTA. Upcoming → “Manage event”, Revealed → “View gallery” (secondary). Last tile is the dashed “Create new event” card.

Guest preview (desktop)

Right column of Create · Details, Create · Look and Settings. Render the real Join component scaled, not a screenshot.

Let’s set up your first event

+ Create new event

Empty state (first-time host)

Shown instead of the grid when a host has 0 events. Illustration + 3 numbered setup steps + one CTA.

Now · Share the link

Oct 18 · Guests shoot

After · Reveal

“What happens next” timeline

Create · Share step. Done step = violet check, upcoming = tint circle, 2px connector.

Unsaved changes

Discard

Save changes

Save card

Desktop Settings, sticky under the preview. Only appears once something changed; amber dot = unsaved.

Delete event

Can’t be undone.

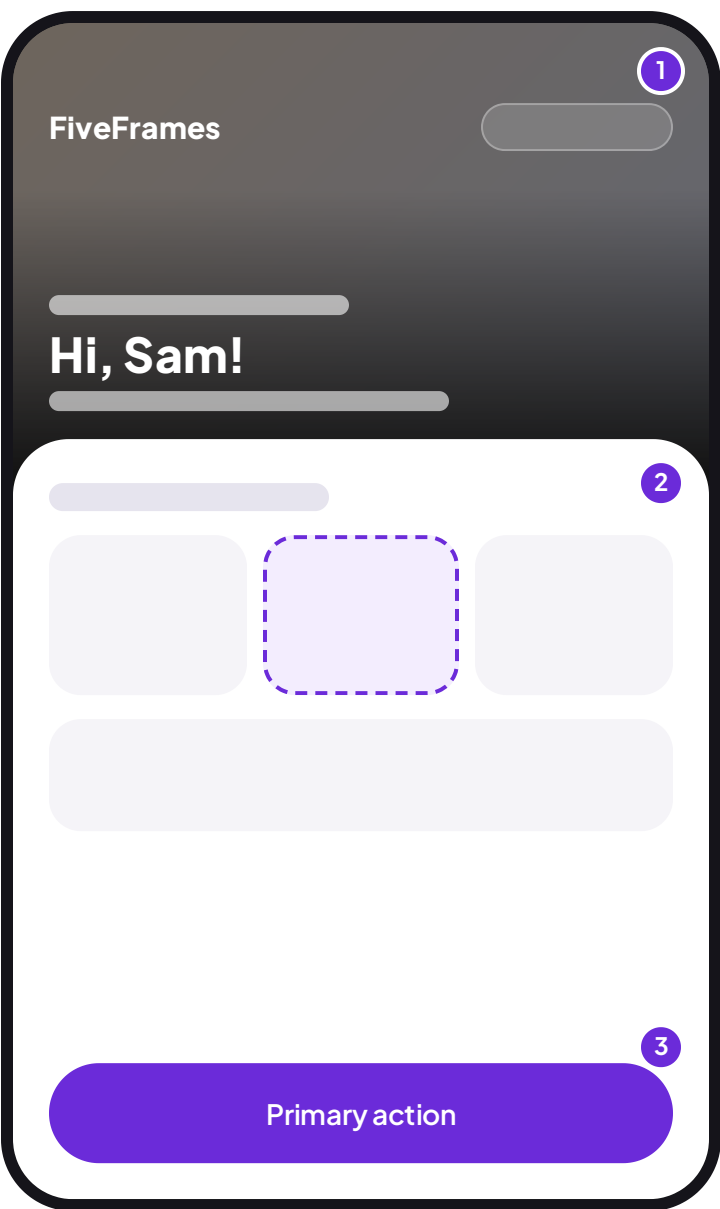

Delete event

Dangerzone card

Always last in Settings, separated from the save action. Opens a confirm dialog that names the photo count.

Layout & developer handoff

Every screen is the same shell: a photo header with the event’s cover, and a white sheet that slides up over it. Build the shell once and swap what goes inside.

- 1

Photo header · 271px
Event cover, background-size: cover, centered. Overlay: linear-gradient(#14141480 36%, #141414 97%). Top bar at safe-area-top + 6px; title block pinned to the bottom with 40px bottom padding (24 of it sits under the sheet). Photo viewer and Preview skip this and go full-bleed dark.
- 2

Bottom sheet
margin-top –24px over the header, radius/sheet 28 on top corners, surface/base, padding 20 sides / 20–26 top / 24 bottom, 16–20 gap between blocks. Page background is surface/dark so the rounded corners blend.
- 3

One primary action, pinned low
The main button sits at the bottom of the sheet (margin-top: auto) inside thumb reach. Keep it visible above the keyboard on Join and Preview. Label names the action: “Take shot 3”, not “Continue”.

Responsive

Guest (mobile–first): designed at 390, works 360–480. Above 480, keep a centered 430px column on surface/dark with the cover photo blurred behind it.

Host: mobile screens up to 1023. From 1024 switch to the desktop (D-series) screens: top nav, 120px gutters, 1200px content column. See “Desktop layouts” below.

States & behaviour

- Join has 3 states: not open yet (show start time, Join disabled) · open · closed (link to gallery if revealed, else “Gallery opens soon”).
- Returning guests skip Join (session saved on the device).
- Retake is free; Keep is final and uses a shot. Capture closes automatically at the end time.
- Delete confirm: “Delete Josh’s photo? This can’t be undone.” → Delete photo / Keep it.
- Empty host gallery: “No photos yet — share the QR to get started.”
- Upload failed: keep the photo on the device and show “Photo didn’t upload. Check your connection and tap Retry.”
- Settings: save card appears only when something changed; leaving with unsaved edits asks to confirm. Create event autosaves as a Draft.
- Password reset: link valid 30 min, resend unlocks after 60 s. Same confirmation copy whether or not the email exists.

Accessibility

- Text contrast ≥ 4.5:1 — text/muted on white is 5.3:1. Placeholder grey is for placeholders only.
- Touch targets ≥ 44x44 (pad the 32px compact buttons).
- Focus: 1.5px brand/primary border + 4px violet 12% ring. Never remove outlines.
- Real button, input and label elements; aria-label on icon-only buttons (Back, Close, Download photo, Delete photo).
- Photo alt text: “Photo by Mia Reyes, 2:18 PM” + message when present.
- Respect prefers-reduced-motion; countdowns announce politely (aria-live), at most once a minute.

Assets, icons & media

- Fonts (Google Fonts, display=swap): Plus Jakarta Sans 400/500/600/700/800 + Fraunces 600 for headings.
- Icons: 24 grid, 1.75–2 stroke, round caps. Lucide names: camera, clock, lock, eye, eye-off, trash-2, download, link, copy, chevron-left/right, x, calendar, user, image, check, arrow-up-down, info.
- Camera: in-browser only (getUserMedia, rear camera by default). No camera-roll uploads in the MVP.
- Images: keep originals; serve 400w thumbs + 1600w viewer as WebP. Locked teaser uses tiny blurred thumbs.
- Cover image: min 1600x1000. Download all = ZIP built server-side.
